

3D Spark Appoints Julia Lakämper as CTO and Announces Engineering Leadership Transition

Julia Lakämper has been appointed Chief Technology Officer. Julia has already played a central role in advancing the company's technology. As CTO, she will lead the continued development and scaling of the platform, with a focus on strengthening its capabilities for manufacturing decision-making.

Arnd Struve, who previously served as CTO, will transition into the role of Lead Engineer. This change reflects his decision to adjust his professional focus and pursue a different field of activity, while remaining an integral part of the team.

Arnd has been instrumental in building the technical foundation of the 3D Spark platform. His contributions have shaped the company's engineering approach and product development, and 3D Spark will continue to benefit from his expertise in his new role.

This transition reflects 3D Spark's commitment to continuity, strong technical leadership, and long-term growth.
